Sediment abatement  
Sediment removal  
Near shore habitat  
Offshore habitat

An aerial photograph of a stream flowing through a wooded area. The stream is dark green and appears to be carrying a significant amount of sediment. On the right bank, there is a large, dark, muddy area that looks like a sediment trap or a point of deposition. A dirt road runs parallel to the stream on the right side. The surrounding vegetation consists of bare trees and dry grass, suggesting a late autumn or winter setting. There are some structures and a pile of rocks visible at the top of the image, and a pile of logs at the bottom right.
