Traits of Effective Cribs

They reside in relatively **shallow water** (10 to 15 feet)

·They receive ample sunlight and they support algae and other organic growth?

·They are in water that is shallow enough to let submergent plants grow nearby?

·They sit on a **hard** bottom?

·They are at least four feet **high**

·They have a space at the base that lets fish **swim under** the crib

·They are **thickly packed in the center** with various sizes of brush and branches

·They have a **complex** design

·They are **placed together** with other cribs

·They are in lakes that contain **little or no natural structure**
